

DESCRIPTIVE ABSTRACT

The invention relates to a method and a system for transferring to a same client terminal (2) at least a first flow with a first service quality and at least a second flow with a second service quality, said first
5 flow being transmitted to the client terminal (2) through an unconnected network, and said second flow being transmitted to said client terminal (2) by a content server (6) through a connected network after network resource booking with service quality by
10 exchanging messages via the unconnected network.

The method according to the invention further comprises the following steps:

- establishing a high throughput link between the client terminal (2) and the content server (6);
- 15 - transmitting to the client terminal (2) through said high throughput link, the second flow with the booked service quality.
